**MEETING DESCRIPTION:** Final public meetings on a study to restore water quality of the recreation/swimming use of non-tidal Mill Creek which is impaired due to bacterial violations. . The watershed area includes an unnamed tributary to Kissinger Millpond and Kissinger Millpond.

**DESCRIPTION OF STUDY:** Virginia agencies have been working to identify sources of the bacterial contamination in Mill Creek. The impairment spans approximately 4 stream miles in Northumberland County. This stream is impaired for failure to meet the recreational (swimming) designated use because of bacterial water quality standard violations.

Stream	County	Impairment Length (mi)	Impairment
Mill Creek	Northumberland	3.94	Recreational (swimming) Use

The study reports on the current status of the Creek via sampling performed by the Virginia Department of Environmental Quality and the possible sources of bacterial contamination. The study recommends Total Maximum Daily Loads, or TMDLs, for the impaired Creek. A TMDL is the total amount of a pollutant a water body can contain and still meet water quality standards. To restore water quality, bacterial levels have to be reduced to the TMDL amount.
